

JANDEL

Cylindrical Probe Mounting Adaptor

Jandel Engineering offers the mounting block that is used on Jandel four point probing systems as an option for use in mounting the Cylindrical Probe onto custom fixtures. The mounting block is made of black anodized aluminum. The Cylindrical probe is secured in-place by a red Teflon thumbscrew. The block has some existing mounting holes, however, additional mounting holes can be drilled and tapped into the block by the end user as needed.
